Dear Ben & Anton

WMS Implementation

The Datascop team performed the project management timeously and efficient by keeping to deadlines and ensuring that all processes from the labelling of the stock to the go-live stock take were all executed according to plan. The time spent on-site after go-live, holding our hands was invaluable and confidence booster to our team. Datascop's guidance and support was key to achieve our goal.

Thank you very much for the high levels of patience in dealing with us and our queries, and persevering in achieving a successful WMS implementation.

Our staff enjoys the visibility and process measurement inherent in WMS. Three weeks past go-live we are close to reaching our targets. The new working methods have been accepted and we look forward to added benefits WMS will offer us.

We can definitely recommend Datascop to any company in the warehouse or manufacturing Syspro environment. The software is tried and tested, and their implementation team knowledgeable and competent.

Best regards
